

Multi Pair TC Wire Twist

APPLICATIONS

Medical, Electrical.

PRODUCT DESCRIPTION

Multi Pair TC Wire Twist.

GENERAL INFORMATION

Two wires joined by twisting them together down the length of the wires to form most types of thermocouples including Type T, J, and K.

Can be made from conductors with diameters of 36 to 48 AWG (.005" to .00124").

DESIGN NOTES

Any conductors can be joined in this fashion; they don't actually have to form thermocouples.

The twisted design is especially good for applications where the TC wire is being repeatedly flexed.
